Town of Olds Launches Leak Detection Network

6 August 2010, Olds, Alberta – As part of the Town of Olds continued commitment to the Alberta Water for Life Strategy, during the 2010 budget deliberations as part of the Capital Budget, Town Council agreed with the recommendation from administration to engage CMI Services Ltd. of Calgary to install data loggers within Olds to create a leak detection network.

This network will monitor the vibrations within the water distribution system for indications of leaks within the system. The data loggers will be installed in the same locations as residential and commercial water meters, and installation takes approximately 20 minutes to complete.

Identified representatives of CMI Services Ltd. will be knocking on doors for ad hoc installations, and telephoning residents and business owners to schedule appointments to access specific premises to install these data loggers.

The project is anticipated to get underway the week of 9 August 2010.
